

# Cryptobug

*Cryptolaemus montrouzieri*

## Target(s)

Various mealybug species in all stages.

## Mode of action

Predatory beetles and larvae eat the mealybugs completely.

## Application & Storage

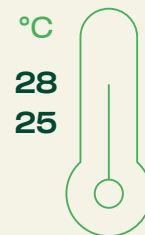

Beetles are more mobile compared to their larvae and therefore more useful for general introductions or in high crops. When possible, use larvae for hotspot treatment. Deploy Cryptobug in the evening among (infected) plants (Diboxes can also be used).

Storage after receipt: 1-2 days at 10-15°C, in the dark.

## Direction for use

The minimum temperature for use of Cryptobug is 16°C.

However, as Cryptobug favors high temperatures, Cryptobug is most effective at temperatures between 25°C and 28°C.

## Packaging

Cardboard box containing 500 adults.
